

BRIAN JARRETT

Senior Systems Engineer

Grove, OK celttechie@gmail.com celttechie.github.io github.com/celttechie

PROFESSIONAL SUMMARY

Senior Systems & Platform Engineer with a 30-year foundation beginning in U.S. Air Force avionics, specializing in rigorous system validation, infrastructure automation, and data integrity. Proven track record of mastering complex, unfamiliar architectures and becoming an organizational SME. Architect of robust ETL pipelines (Python/SQL) that enforce data quality at the source to deliver authoritative sources of truth. An objective, fact-based troubleshooter who translates intricate system, storage, and networking data into resilient operational workflows that fix the core infrastructure issues hindering operations teams and executives.

TECHNICAL SKILLS

Data Engineering & Analysis

- **Python Stack:** Pandas, NumPy, Flask, SQLAlchemy, XlsxWriter, openpyxl.
- **Data Integrity:** ETL Pipeline Engineering & Data Validation, Data Normalization.
- **Databases:** PostgreSQL, MySQL, Redis, MongoDB.

Cloud & Systems Infrastructure

- **Compute & Networking:** Cisco UCS Servers, Cisco Fabric Interconnect, High-Availability Clusters, Ceph (Storage).
- **Virtualization:** OpenStack, VMware vSphere, KVM, Proxmox.
- **Automation:** Ansible, CI/CD (Jenkins, Gerrit, GitHub Actions), Bash/Python Scripting, SaltStack.
- **Identity & Security:** FreeIPA/LDAP, RBAC/HBAC, FedRAMP Compliance, Qualys Security Intelligence.

Leadership & Methodology

- **Ecosystem Mastery:** Rapid Technical Adaptation, SME Leadership, Technical Mentoring.
- **Problem Solving:** Advanced System Diagnostics & Troubleshooting, Validation & QA Testing, Monitoring.
- **Community: FIRST Robotics Mentor:** Teaching electronics, programming, and methodical troubleshooting and systems design.

PROFESSIONAL EXPERIENCE

Cisco Systems | Cloud Engineering Technical Leader (FedRAMP)

AUG 2019 - JULY 2026 (REMOTE)

Managed FedRAMP operations and critical compute/storage infrastructure for the Webex for Government platform. Responsible for driving technical strategy, mentoring cross-functional engineering teams, and building automated tooling to enhance security posture, ensure SLA compliance, and streamline federal audit readiness.

- **DevSecOps & Compliance Automation:** Developed automated reporting tools using the **Qualys API** to extract compliance metrics. Engineered Python scripts to parse raw **STIG XCCDF (XML)** data and map it to

compliance results, enabling the automated generation of audit-ready STIG checklists. This compliance-as-code bridge filled critical gaps in vendor-provided reporting and eliminated hundreds of manual audit hours.

- **Mission-Critical Data Platform:** Engineered a vulnerability management platform using **Python (Pandas, SQLAlchemy)** and **PostgreSQL**. Built custom ETL pipelines to ingest and synchronize data from the **Jira API**, providing teams with high-fidelity dashboards for severity tracking and SLA compliance. Integrated data with **Tableau** to enable executive-level visibility into remediation progress.
- **Inventory Analytics & Infrastructure Operations:** Leveraged **Pandas** for large-scale data manipulation, merging disparate inventory reports and datasets into actionable operational insights across **Cisco UCS** bare-metal hardware and cloud compute. Transformed manual Excel-based tracking into automated trend analysis for monthly executive reporting.
- **Technical Guidance & Mentorship:** Served as infrastructure team lead, providing technical direction across the Webex for Government environment. Mentored engineering teams in methodical troubleshooting and supported the analysis and resolution of complex vulnerability and compliance remediation issues, ensuring continuous service stability under strict SLAs.
- **Skills:** Python (Pandas, SQLAlchemy), PostgreSQL, Jira API, Qualys API, STIG Compliance (XCCDF/XML), ETL Pipelines, Tableau, Ansible, RHEL/Ubuntu, Cisco UCS, FedRAMP High/Moderate.

Cisco Systems | Cloud Systems Engineer - Identity & Platform

JAN 2017 - AUG 2019 (REMOTE)

Managed and optimized mission-critical compute infrastructure for Webex Commercial and FedRAMP environments. Collaborated with Networking and Storage teams to ensure zero-downtime availability, robust identity access control, and high security across US data centers.

- **Enterprise Identity Architecture:** Architected and deployed a **High-Availability (HA) FreeIPA cluster** to replace a legacy, high-overhead 389 Directory Server environment. Automated VM deployment in **OpenStack** using **Ansible**, enabling centralized RBAC and HBAC for 2,000+ Linux/Windows servers and infrastructure devices across multiple data centers.
- **Virtualized Infrastructure Operations:** Managed large-scale compute services using **vSphere** on **Cisco UCS** hardware. Administered critical infrastructure including bastion hosts, LDAP/FTP servers, and antivirus solutions, ensuring consistent high availability.
- **Vulnerability Management:** Led security patch remediation efforts for compute services in highly regulated federal environments. Researched and implemented system security patches, advised engineering teams on remediation strategies, and managed **Qualys** vulnerability scanners to maintain strict compliance.
- **Skills:** Ansible, FreeIPA, OpenStack, VMware vSphere, Cisco UCS, RHEL/CentOS, Windows Server, RBAC/HBAC, Qualys, FedRAMP Compliance.

Select Group @ Cisco | Cloud DevOps/QA Engineer (Contract)

FEB 2016 - JAN 2017 (REMOTE)

Provided specialized DevOps and QA engineering support for Cisco's OpenStack-based Public Cloud (InterCloud Services). Focused on performance optimization, automated configuration management, and stability engineering for large-scale cloud deployments.

- **Performance Optimization:** Identified and removed redundant **Nova Scheduler** filters, reducing instance scheduling time for 700 nodes from 20 seconds to 5 seconds—a **75% improvement** in orchestration speed.
- **Infrastructure-as-Code at Scale:** Engineered and executed **Ansible** playbooks to manage complex bare-metal configurations through **lights-out management (LOM)** interfaces and automated cron jobs across hundreds of production servers simultaneously.

- **Cloud Infrastructure Evaluation:** Stood up **RHUI (Red Hat Update Infrastructure)** and **Proxmox** clusters for **Proof-of-Concept (PoC)** assessments to determine viability for integration with Cisco InterCloud Services.
- **Stability Engineering:** Diagnosed and resolved a critical race condition involving cloudbase-init on Windows 2008/2012 images within **OpenStack**, eliminating intermittent reboots during initial instance setup.
- **Cloud QA & Orchestration:** Managed global test cycles for Compute and Heat components during major cloud upgrades. Developed **Python** and **Bash** scripts coupled with Ansible to perform comprehensive orchestration tests.
- **Skills:** OpenStack (Nova, Heat, Neutron, Glance), Ansible, Python, Bash, RHUI, Proxmox, Linux/Windows Administration, Performance Tuning, Cloud QA.

Australian Laboratory Services | Senior Systems & Storage Administrator

SEP 2014 - JAN 2016 (GRAND JUNCTION, CO)

Managed, modernized, and optimized enterprise storage, virtualization, database, and network infrastructure. Engineered high-availability distributed storage clusters, automated server provisioning, and implemented comprehensive monitoring to ensure maximum uptime, data integrity, and network performance.

- **Distributed Storage & Virtualization:** Engineered an Ubuntu-based **Ceph cluster** for **VMware ESXi** hosts, benchmarking iSCSI vs. RBD performance to optimize block storage access. Leveraged **Ceph RBD snapshots** to manage automated database schema testing, enabling a major production database upgrade with zero errors.
- **Infrastructure Automation:** Implemented **SaltStack** to manage Linux virtual environments and automate the configuration and rapid provisioning of new **Ceph** storage nodes and virtual machine resources.
- **Database & Data Integrity:** Wrote custom **Python (SQLAlchemy)** verification scripts to check for missing SQL foreign keys and ensure data integrity during major migrations. Configured replication and backups of production **MySQL** databases using **LVM snapshots** and **rsync**.
- **System Stability & Monitoring:** Installed **Observium** for performance telemetry and integrated proactive checks into **Nagios** to monitor production systems, decreasing service restarts from weekly to quarterly.
- **Network Hardware Engineering:** Troubleshoot and resolved a complex routing issue where **Asterisk** VoIP traffic was throttled by backup data tunnels; replaced overloaded gateway hardware, doubling available network bandwidth.
- **Skills:** Ubuntu/CentOS, VMware ESXi, Ceph RBD, iSCSI, SaltStack, Python (SQLAlchemy), MySQL, Nagios, Observium, Asterisk VoIP, Cisco/HP Routers & Switches, Sophos UTM, VLANs, IPsec VPN.

Garfield County School District 16 | Senior Systems/Network Administrator

OCT 2002 - JUN 2014 (PARACHUTE, CO)

Managed and modernized the district-wide enterprise network, systems, and core educational platform infrastructure. Led high-impact IT modernization projects, automated administrative processes, and engineered cost-effective systems that dramatically reduced operational costs and IT support overhead.

- **Systems Integration & Automation:** Developed a custom **Flask (SQLAlchemy)** web application that synchronized the centralized Student Information System (SIS) with **Active Directory** and **Google Apps**. Built self-service password reset and status tools for teachers, resulting in a **97% reduction in recurring support calls** to the helpdesk.
- **Enterprise Modernization & Development:** Spearheaded the replacement of a legacy, fragmented student information system with a web-based, centralized platform, eliminating manual data syncing between schools. Streamlined state compliance reporting by developing custom **PHP** generation scripts interfacing with the **PostgreSQL** database.

- **Infrastructure & Systems Virtualization:** Designed and administered virtualized host environments using **Citrix XenServer** and **VirtualBox** to run critical Windows Server 2008 and Ubuntu Linux servers. Supervised low-voltage cabling and hardware installation contractors for new facilities to ensure strict specification compliance.
- **Network Engineering:** Engineered a high-speed WAN connection between district buildings using **Ruckus wireless bridges**, increasing bandwidth by **6,500%** (1.5Mbps to 100+ Mbps) with zero ongoing monthly service costs. Managed core networking infrastructure including **Cisco Routers, Switches, PIX Firewalls**, and **Smoothwall** web filters.
- **Unified Communications & End-User Compute:** Deployed **Cisco CallManager** and **Cisco Unity** voice systems district-wide. Architected a centralized desktop computing solution using **Windows Terminal Servers** and **HP Thin Clients** for 6 computer labs, saving the district over **\$60,000** in capital expenditure and simplifying end-user support.
- **Skills:** Python, Flask, SQLAlchemy, PHP, PostgreSQL, Ubuntu, Windows Terminal Server, Windows AD, Citrix XenServer, VirtualBox, Cisco CallManager/Unity, Cisco Routers & Switches, PIX, Ruckus Wireless Bridges/APs, HP Thin Clients, Google Apps, Smoothwall, Active Directory.

Foundational Experience

1991 - 2002

Established a lifelong technical foundation by translating a low-level understanding of hardware, networking, and software into rigorous testing and validation methodologies. This ground-up engineering approach ensures comprehensive diagnostics and root-cause analysis at every layer of the stack. * **Sales Engineering & Systems Integration:** Tested **ImageCast** software integrations with systems management suites including **SMS, CA Unicenter**, and **Desktop DNA**. Defined customer software requirements, submitted feature change requests, and conducted technical product demonstrations and training for enterprise clients such as **HP, Target**, and **NEC**. Helped answer technical questions at trade shows. * **Technical Services & Test Lab Management:** Merged and managed QA testing with the technical support department. Designed test cases, executed testing plans, and managed the lab's **Windows** and **Linux** servers and test networks. Redesigned, built out, and managed the company's network, labs, and server infrastructure following a corporate split. * **Software QA & Testing Leadership:** Promoted from contractor to QA Lead, managing all testing operations for **ImageCast** and **DrivePro** products. Structured software testing workflows by implementing the company's first bug-tracking system, drafting comprehensive test plans, and maintaining lab hardware and network infrastructure. * **Training & Team Optimization:** Boosted support staff effectiveness and QA productivity by rotating tech support personnel through active lab testing scenarios. Trained technicians on networking topologies, testing methodologies, and product architecture to improve time-to-resolution for support issues. * **Hardware Assembly & Diagnostics:** Built custom computers, performed component-level hardware and peripheral repairs, and conducted software troubleshooting. Developed quotes for client builds and mastered motherboard/component compatibility. * **Airborne Radar & Electronics Engineering (U.S. Air Force):** Served as an Airborne Warning and Control Radar Journeyman (AWACS), repairing high-power microwave systems, high-voltage circuits, and analog/digital electronics. * **Skills:** Analog & Digital Electronics, Circuit Analysis, System Diagnostics (Binary/Hex), VMS/PC Architecture, Disk Cloning (ImageCast, DrivePro), Software QA & Test Automation, Bug-Tracking Systems, Network Design, Windows/Linux Lab Administration, Technical Training, Requirements Engineering, Systems Management (SMS, CA Unicenter, Desktop DNA).

EDUCATION & CERTIFICATIONS

- **Regis University:** C Programming/Unix courses
- **Community College of the Air Force:** Avionics/Electronics Technician - RADAR Specialist (AWACS)
- **Colorado School of Mines:** 2 Years (Electrical Engineering/Physics focus)
