

BRIAN JARRETT

Senior Systems Engineer

Grove, OK celttechie@gmail.com celttechie.github.io github.com/celttechie

PROFESSIONAL SUMMARY

Senior Systems & Platform Engineer with a 30-year foundation beginning in U.S. Air Force avionics, specializing in rigorous system validation, infrastructure automation, and data integrity. Proven track record of mastering complex, unfamiliar architectures and becoming an organizational SME. Architect of robust ETL pipelines (Python/SQL) that enforce data quality at the source to deliver authoritative sources of truth. An objective, fact-based troubleshooter who translates intricate system, storage, and networking data into resilient operational workflows that fix the core infrastructure issues hindering operations teams and executives.

TECHNICAL SKILLS

Data & Systems Engineering:

- Python (Pandas, NumPy, Flask, SQLAlchemy)
- ETL Pipeline & Data Validation
- PostgreSQL, MySQL, Redis, MongoDB
- Systems/Robotics Design

Systems & Distributed Scale:

- Cisco UCS & Fabric Interconnect
- OpenStack (Nova, Heat)
- vSphere/ESXi, XenServer, Proxmox/ KVM
- Ceph Block Storage (RBD)
- High-Availability (HA) Clustering

DevOps, Security & Leadership:

- Ansible, SaltStack
- CI/CD (GitHub Actions, Jenkins)
- FreeIPA/LDAP, RBAC/HBAC
- FedRAMP Compliance
- Qualys Vulnerability/Compliance
- Technical Leadership & Mentoring
- Advanced Diagnostics & Troubleshooting

PROFESSIONAL EXPERIENCE

Cisco Systems | Cloud Engineering Technical Leader (FedRAMP)

Aug 2019 - July 2026 (Remote) * Infrastructure & Operations Lead: Led operations of critical compute and storage systems on **Cisco UCS** hardware for the Webex for Government (FedRAMP) cloud, maintaining high platform availability and strict SLA tracking. * **Data Platform Engineering:** Designed and operated a vulnerability management system using a custom ETL pipeline to extract data from **Jira API** and synchronize it to a **PostgreSQL** database. Built a **Python (Pandas, SQLAlchemy)** web frontend and connected **Tableau** dashboards to display executive-level SLA metrics and real-time remediation progress. * **Compliance Automation:** Engineered Python reporting tools to parse raw **STIG XCCDF (XML)** files and merge them with security data using the **Qualys API**, generating automated, audit-ready compliance checklists. * **Technical Mentorship:** Provided technical guidance across federal cloud environments, mentoring multi-tier engineering teams in root-cause analysis and troubleshooting complex compliance and system performance issues. * **Skills:** Python (Pandas, SQLAlchemy), PostgreSQL, REST APIs (Jira, Qualys), ETL Pipelines, Tableau, Ansible, RHEL/Ubuntu, Cisco UCS, STIG/FedRAMP Compliance.

Cisco Systems | Cloud Systems Engineer - Identity & Platform

Jan 2017 - Aug 2019 (Remote) * Identity & Access Management: Designed and deployed a **High-Availability (HA) FreeIPA cluster** using **Ansible** to automate RBAC/HBAC across **2,000+ servers, storage nodes, and network devices**, replacing an aging 389-ds directory framework. * **Virtualization & Security:** Administered large-scale compute environments using **vSphere** on **Cisco UCS** hardware. Orchestrated **Qualys** vulnerability scanning and patch remediation across commercial and FedRAMP sites while maintaining core bastion and identity services. * **Skills:** Ansible, FreeIPA, OpenStack, VMware vSphere, Cisco UCS, RHEL/CentOS, Windows Server, RBAC/HBAC, Qualys, FedRAMP Compliance.

Select Group @ Cisco | Cloud DevOps/QA Engineer (Contract)

Feb 2016 - Jan 2017 (Remote) * Performance Optimization: Identified and removed redundant **Nova Scheduler** filters in **OpenStack**, reducing instance scheduling time for 700 nodes from 20 seconds to 5 seconds (a **75% improvement** in orchestration speed). * **Cloud Infrastructure:** Configured and evaluated **RHUI (Red Hat Update Infrastructure)** and **Proxmox** clusters for InterCloud Services. Automated bare-metal server

configuration using **Ansible** via lights-out management (LOM) interfaces. Troubleshoot and resolved a critical OpenStack **cloudbase-init** race condition on Windows images that was causing constant reboots. * **Cloud QA:** Managed global test cycles for Compute and Heat components during cloud upgrades. Developed **Python, Bash,** and **Ansible** scripts to perform comprehensive automated orchestration tests. * **Skills:** OpenStack, Ansible, Python, Bash, RHUI, Proxmox, CentOS/RHEL/Windows, Performance Tuning, Cloud QA.

Australian Laboratory Services | Senior Systems & Storage Administrator

Sep 2014 - Jan 2016 (Grand Junction, CO) * Distributed Storage & Virtualization: Engineered an Ubuntu-based **Ceph cluster** for **VMware ESXi** hosts, benchmarking iSCSI vs. RBD performance. Used **Ceph RBD snapshots** for automated schema migration testing with zero errors. * **Data Integrity & Automation:** Wrote custom **Python (SQLAlchemy)** verification scripts to audit SQL foreign keys during data migration. Implemented **SaltStack** to automate Linux VM and Ceph node provisioning. * **System Monitoring & Network Hardware:** Integrated **Nagios** and **Observium** to monitor network operations, reducing service restarts. Diagnosed WAN/VPN bottlenecks and upgraded gateway hardware to double network throughput. * **Skills:** Ubuntu, Ceph RBD, VMware ESXi, SaltStack, Python, SQLAlchemy, Nagios, Observium, MySQL, Asterisk, VPN Routing.

Garfield County School District 16 | Senior Systems/Network Administrator

Oct 2002 - Jun 2014 (Parachute, CO) * Systems Integration & Automation: Programmed a custom **Flask (SQLAlchemy)** app syncing Student Info Systems with **Active Directory** and **Google Apps**, reducing account helpdesk tickets by **97%**. * **Network & VoIP Engineering:** Designed a high-speed WAN using **Ruckus wireless bridges**, increasing bandwidth by **6,500%** (1.5Mbps to 100+ Mbps) with zero monthly service costs. Deployed district-wide Cisco CallManager. * **Compute Modernization:** Centralized desktop computing with **Windows Terminal Servers** and **HP Thin Clients** for 6 labs, saving **\$60k+** in CAPEX. Replaced legacy databases with centralized PostgreSQL platforms, and automated state compliance reporting via custom PHP scripts. * **Skills:** Python, Flask, SQLAlchemy, PHP, PostgreSQL, XenServer, VirtualBox, Cisco Routers/Switches/PIX, Cisco CallManager, Ruckus Wireless.

Foundational Experience

1991 - 2002 * Software QA Lead (StorageSoft/Phoenix Tech): Managed testing and support departments. Structured QA testing workflows for **ImageCast** disk cloning tools and designed Windows/Linux test lab environments. * **Airborne Radar Journeyman (U.S. Air Force):** Repaired high-power microwave systems, high-voltage circuits, and analog/digital systems on AWACS aircraft. * **Skills:** Analog & Digital Diagnostics, VMS/PC Architecture, Disk Cloning (ImageCast), Software QA, Technical Training.

EDUCATION & CERTIFICATIONS

* **Regis University:** C Programming/Unix courses * **Community College of the Air Force:** Avionics/ Electronics Technician - RADAR Specialist (AWACS) * **Colorado School of Mines:** 2 Years (Electrical Engineering/Physics focus)
